Geomorphology and Global Tectonics

Edited by

Michael A. Summerfield

 WILEY

GEOMORPHOLOGY AND GLOBAL TECTONICS

Edited by

Michael A. Summerfield

Department of Geography, University of Edinburgh

Wiley India Pvt. Ltd.

CONTENTS

<i>List of contributors</i>	xiii
<i>Preface</i>	xv
<i>Acknowledgements</i>	xvii
PART I INTRODUCTION	
1 Geomorphology and global tectonics: introduction	3
<i>Michael A. Summerfield</i>	
1.1 Aim and Context	3
1.2 Early Ideas	4
1.3 Davisian Dogma	5
1.4 Erosion Surfaces, Denudation Chronology and Tectonics	6
1.5 Current Issues	8
1.6 Plan of the Book	9
<i>References</i>	11
PART II GENERAL MODELS AND EMPIRICAL APPROACHES	
2 Application of digital elevation models to macroscale tectonic geomorphology	15
<i>Larry Mayer</i>	
2.1 Introduction	15
2.2 Digital Elevation Models	16
2.3 Topographic Analysis and DEMs	16
2.4 Use of DEMs for Tectonic Studies	18
2.5 DEMs for Macroscale Tectonic Geomorphology	19
2.5.1 Grand Canyon erosion	19
2.5.2 Volcanic eruptions: Mount St Helens	20
2.5.3 Intraplate seismicity: New Madrid, Missouri, USA	20
2.5.4 Continental rifting: Baja California	21
2.6 Future Research Directions	24
<i>Acknowledgements</i>	25
<i>References</i>	25
<i>Appendix: Some sources of global elevation data</i>	27
3 Coupled tectonic-surface process models with applications to rifted margins and collisional orogens	29
<i>Christopher Beaumont, Henk Kooi and Sean Willett</i>	
3.1 Introduction	29
3.1.1 Convergent plate boundaries	30
3.1.2 Divergent plate boundaries	31
3.1.3 Stating the problem	34

3.2	Surface Process Models and Coupling to Tectonic Models	34
3.3	Denudational Response to Kinematic Tectonic Forcing	37
3.3.1	Outline of the surface processes model	37
3.3.2	Response to tectonic forcing	37
3.3.2.1	Steady-state landscape	37
3.3.2.2	Linear response and landscape response time	37
3.3.2.3	Slow, intermediate, rapid and impulsive tectonic forcing	38
3.3.2.4	Nonlinear behaviour	40
3.3.3	Comparison with other work	40
3.4	Post-Rift Evolution of Rifted Margins	41
3.4.1	Escarpment evolution	41
3.4.2	Comparison with other work	43
3.5	Dynamically Coupled Models of Tectonics and Denudation in Orogens	44
3.5.1	Evidence of coupling between tectonics and surface processes	44
3.5.2	Results from numerical models	46
3.5.3	Results from physical models	48
3.6	Future Research Directions	50
	<i>Acknowledgements</i>	51
	<i>References</i>	52
4	Fission-track thermochronology and the long-term denudational response to tectonics	57
	<i>Andrew J.W. Gleadow and Roderick W. Brown</i>	
4.1	Introduction	57
4.2	Fission-Track Thermochronology	58
4.2.1	Fission-track dating	58
4.2.2	Fission-track annealing and thermal history modelling	59
4.3	Interpretation of Fission-Track Data	60
4.3.1	Cooling history styles	60
4.3.2	Discriminating cooling from thermal event styles	62
4.3.3	Vertical fission-track sampling profiles	63
4.3.4	Tectonic disruption of fission-track patterns	66
4.4	Application to Continental Denudation	66
4.4.1	Deriving estimates of denudation	66
4.4.2	Estimating thermal gradients	67
4.4.3	Transient thermal events	67
4.4.4	Denudation in active orogenic belts	68
4.4.5	The relationship between denudation and tectonics	69
4.5	Conclusions	71
4.6	Outstanding Questions and Future Directions	72
	<i>Acknowledgements</i>	73
	<i>References</i>	73
5	Macroscale process systems of mountain belt erosion	77
	<i>Niels Hovius</i>	
5.1	Introduction	77
5.2	Global Sediment Flux	78
5.2.1	Empirical models for sediment yield: the role of climate and relief	78
5.2.2	Tectonic control on sediment yield	79
5.3	Landsliding	81
5.3.1	Limits to local relief	81
5.3.2	Rate and scaling behaviour of landslides	81

5.3.3	Residence time	84
5.3.4	Causes of slope instability	84
5.4	Drainage Patterns	84
5.4.1	Fluvial entrainment	85
5.4.2	Transverse drainage	85
5.4.3	Response of drainage patterns to thrust-generated folding	85
5.5	Longitudinal River Profiles	88
5.5.1	Mathematical models	88
5.5.2	Regional consistencies in profile form	88
5.5.3	Processes of bedrock incision	91
5.5.4	Terrace studies	94
5.5.5	Long profile development	95
5.5.6	Glacial erosion	97
5.6	Topography and Orogen Dynamics	97
5.6.1	Topographic development and steady state: a synthesis	97
5.6.2	Surface control of orogen wedge dynamics	100
5.7	Scaling the Mountain	100
	<i>Acknowledgements</i>	101
	<i>References</i>	101

PART III MORPHOTECTONIC EVOLUTION IN INTERPLATE SETTINGS

6	Geodynamic processes in the Southern Alps, New Zealand	109
	<i>J. Mark Tippett and Niels Hovius</i>	
6.1	Introduction	109
6.2	Framework of the South Island Collision Zone	109
6.2.1	Tectonic setting of the Southern Alps	109
6.2.2	Climate	113
6.2.3	Geomorphology	113
6.2.4	Lithology and structure	114
6.2.5	Seismicity	115
6.2.6	Deep lithospheric structure and thermal regime	116
6.3	Uplift and Erosion of the Southern Alps	117
6.3.1	Amount and timing of late Cenozoic erosion and rock uplift	117
6.3.2	Rates of late Cenozoic cooling, erosion and uplift near the Alpine fault	118
6.3.3	Modern rates of erosion	121
6.3.4	Modern rates of rock uplift	121
6.3.5	Modern surface displacement	121
6.4	Evolution of Topographic Architecture	122
6.4.1	Eastern flank	122
6.4.2	Western flank	123
6.4.3	Cross-sectional architecture	123
6.4.4	Importance of oblique convergence	128
6.5	Discussion and Outstanding Research Questions	129
6.5.1	Topography	129
6.5.2	Uplift and erosion	129
6.5.3	Evolution of the Southern Alps	130
	<i>References</i>	131
7	Morphotectonic evolution of Taiwan	135
	<i>Jiun-Chuan Lin</i>	
7.1	Introduction	135

7.2	Regional Tectonic Background	135
7.3	The Nature of the Plate Collision Zone in Taiwan	136
7.3.1	Regional tectonics	136
7.3.2	Seismicity	140
7.3.3	Uplift and denudation rates	141
7.3.4	Climatic controls: tropical storms and episodic formative events	141
7.4	Tectonic Landforms of Taiwan	142
7.5	Morphotectonic Evolution of Taiwan	143
7.5.1	Kinematics of arc-continent collision	143
7.5.2	An uplift-denudation interaction model for the Central Range	143
7.5.3	Application to the Coastal Range	144
7.6	Discussion and Conclusions	144
	<i>Acknowledgements</i>	144
	<i>References</i>	145
8	Morphotectonic evolution of Japan	147
	<i>Hiroo Ohmori</i>	
8.1	Introduction	147
8.2	Tectonic Framework of Japan	147
8.3	Seismicity and Crustal Displacement	152
8.3.1	Recent and Quaternary crustal movements	152
8.3.2	Inland Quaternary vertical displacements	154
8.4	Denudation in the Quaternary	156
8.5	Denudation Rates in Relation to Morphotectonics	157
8.6	Change in Altitude Resulting from Concurrent Tectonics and Denudation	159
8.7	Morphological Evolution of the Japanese Mountain Ranges	161
8.8	Discussion and Conclusions	162
	<i>Acknowledgements</i>	163
	<i>References</i>	164
9	Large-scale geomorphology of the Andes: interrelationships of tectonics, magmatism and climate	167
	<i>Lorcan Kennan</i>	
9.1	Introduction	167
9.2	Reconstructing Andean Uplift: Methods	168
9.3	Overview of Plate Tectonic Setting and Kinematics	169
9.4	Uplift of the Northern Andes (11°N to 4°S)	172
9.4.1	Palaeogeographical development	173
9.4.2	Fission-track data	173
9.4.3	Palaeobotanical evidence	173
9.4.4	High-altitude palaeosurfaces in Colombia	173
9.5	Uplift of the Central Andes (4°S to 46°S)	174
9.5.1	Palaeogeographical development	176
9.5.2	Fission-track and other cooling ages in Peru and Bolivia	179
9.5.3	Palaeobotanical evidence	180
9.5.4	High-altitude palaeosurfaces in Peru, Chile and Bolivia	180
9.5.5	Southern Puna and eastern thrust belt of northern Argentina	185
9.6	Uplift of the Southern Andes (46°S–57°S)	185
9.7	Discussion	186
9.8	Conclusions and Research Questions	191
	<i>References</i>	192

10	Morphotectonic evolution of the Himalayas and Tibetan Plateau	201
	<i>Eric J. Fielding</i>	
10.1	Introduction	201
10.2	Tectonic Models	202
10.3	Previous Geomorphological Studies	205
10.4	Morphological Characteristics	211
10.5	Landform Development	213
	10.5.1 Mid-Tertiary	214
	10.5.2 Late Tertiary-Quaternary	214
	10.5.3 Present landscape development	216
10.6	Summary of Morphotectonic History	217
10.7	Conclusions	219
	<i>Acknowledgements</i>	219
	<i>References</i>	219
 PART IV MORPHOTECTONIC EVOLUTION IN INTRAPLATE SETTINGS		
11	Geomorphological evolution of the East Australian continental margin	225
	<i>Paul Bishop and Geoff Goldrick</i>	
11.1	Introduction	225
11.2	Character of the East Australian Continental Margin	225
11.3	Southeast Australian Denudation	229
	11.3.1 Escarpment retreat across a downwarped coastal strip?	231
	11.3.2 Apatite fission-track thermochronology data and margin denudation	233
	11.3.3 Denudation and margin rebound	234
11.4	Southeast Australian Rivers: Planform	234
	11.4.1 Cenozoic valley-filling lavas and southeast Australian drainage history	235
	11.4.2 Mesozoic drainage	235
11.5	Southeast Australian Rivers: Long Profiles	237
	11.5.1 Cenozoic profiles	237
	11.5.2 Modern river long profiles	237
	11.5.2.1 Introduction	237
	11.5.2.2 Summary of a more general equilibrium river long profile form	239
	11.5.2.3 The long profile characteristics of the Lachlan Basin drainage net	239
11.6	Synthesis and Discussion	241
	11.6.1 Synthesis	241
	11.6.2 East Australia and the modelling of the evolution of high-elevation passive continental margins	244
11.7	Future Directions and Research Issues	246
	<i>Acknowledgements</i>	247
	<i>References</i>	247
	<i>Appendix: Theoretical derivation of a general form of the equilibrium long profile</i>	251
12	Morphotectonic evolution of the South Atlantic margins of Africa and South America	255
	<i>Roderick W. Brown, Kerry Gallagher, Andrew J.W. Gleadow and Michael A. Summerfield</i>	
12.1	Introduction	255
12.2	Morphology of the Margins	256
12.3	Regional Geology and Palaeogeography	257
	12.3.1 Pre-break-up Paraná and Karoo Basins	257
	12.3.2 Syn- and post-break-up magmatism	261
	12.3.3 Post-break-up sedimentation and magmatism	263

12.4	Continental Break-Up and Rifting in the South Atlantic	263
12.4.1	Break-up and rifting chronology	263
12.4.2	Regional tectonic setting and structural control	264
12.4.3	Offshore basins	265
12.4.4	Post-break-up plate motion changes	266
12.5	Neotectonics	266
12.6	Denudation Chronologies from Fission-Track Data	267
12.7	Fission-Track Data from the South Atlantic Margins	268
12.7.1	The southeast Brazilian margin	268
12.7.2	The southwest African margin	270
12.7.2.1	South Africa	270
12.7.2.2	Namibia	271
12.8	Mapping Denudation Over Time	272
12.9	Post-Break-Up Landscape Evolution	272
12.10	Conclusions and Outstanding Research Questions	275
	<i>Acknowledgements</i>	276
	<i>References</i>	276
13	Late Cenozoic landscape evolution of the US Atlantic passive margin: insights into a North American Great Escarpment	283
	<i>Frank J. Pazzaglia and Thomas W. Gardner</i>	
13.1	Introduction	283
13.2	Morphological and Geological Setting	284
13.3	Previous Work	286
13.4	Late Cenozoic Flexural Deformation of the Middle and Southern Atlantic Margin	289
13.4.1	Offshore basins	290
13.4.2	Continental denudation	290
13.4.3	Coastal plain	290
13.4.4	Piedmont terraces	290
13.4.5	Time lines	291
13.5	Geodynamic Models	291
13.5.1	One-dimensional model	291
13.5.2	Two-dimensional model	291
13.5.3	Methodological and data errors	293
13.6	Results	293
13.7	Discussion and Conclusions	295
13.7.1	The Fall Zone, Piedmont and Coastal Plain	295
13.7.2	The Blue Ridge and drainage divide	296
13.7.3	A North American Great Escarpment	297
	<i>Acknowledgements</i>	298
	<i>References</i>	298
14	Linking tectonics and landscape development in a passive margin setting: the Transantarctic Mountains	303
	<i>Andrew Kerr, David E. Sugden and Michael A. Summerfield</i>	
14.1	Introduction	303
14.2	The Transantarctic Mountains	304
14.2.1	Morphology	304
14.2.2	Geology	305
14.3	Geophysical, Geochemical and Geochronological Data	307
14.3.1	Gravity and magnetic data	307
14.3.2	Fission-track data	307

14.3.3	Seismic and structural data	308
14.3.4	Geochemical and geochronological data from volcanic rocks	309
14.4	Evidence for Surface Processes	309
14.4.1	Role of recent glacial erosion	309
14.4.2	Models of landscape evolution	310
14.4.3	Climatic interpretation of landscape development	310
14.5	Tectonic Models of Landscape Development	312
14.6	Towards a Model of Landscape Evolution in the Dry Valleys Region	313
14.6.1	Landscape components	313
14.6.2	Denudation chronology	313
14.6.3	Model of landscape evolution	314
14.7	Integration of Geomorphic and Tectonic Approaches: Broader Research Issues	315
14.8	Conclusions	316
	<i>Acknowledgements</i>	316
	<i>References</i>	316
15	Morphotectonic evolution of the Western Ghats, India	321
	<i>Y. Gunnell and L. Fleitout</i>	
15.1	Introduction	321
15.2	The Western Ghats Passive Margin Shoulder: Overview	321
15.3	Theoretical Models	321
15.4	Modelling Assumptions and Geomorphological Constraints	323
15.5	Flexural Model and Erosional History	328
15.6	Discussion	331
15.6.1	The lithospheric model: strengths and limitations	331
15.6.2	Fission-track data in global geomorphology: advantages and disadvantages	333
15.7	Conclusion	335
	<i>Acknowledgements</i>	336
	<i>References</i>	336
16	The growth and decay of oceanic islands	339
	<i>A.B. Watts</i>	
16.1	Introduction	339
16.2	Growth	340
16.3	Flexure of the Lithosphere	342
16.4	Drowned Active Volcanoes	347
16.5	Decay	352
16.6	Discussion	356
	<i>Acknowledgements</i>	358
	<i>References</i>	358
	<i>Index</i>	361
